

Residential Used Cooking Oil Collection Program at Alpha Ridge Landfill

The Howard County Landfill now accepts used vegetable-based cooking oil from residents for recycling. Any type of liquid vegetable oil (i.e., peanut, corn, canola, olive, etc) is accepted. Used cooking oil may be brought to the Alpha Ridge Landfill and left with the attendant at the guardhouse. Please call (410) 313-6444 to arrange an appointment for large quantities.

Please make sure that the cooking oil is not mixed with other fluids (water, petroleum products, soaps, etc). Place the cooking oil in a container with a tight-fitting lid, metal or plastic containers are preferable. Do not fill any container while the cooking oil is still hot as this could cause the container to crack or split; let the oil cool down for a few minutes before filling a container.

Vegetable oil that is mixed with small amounts of animal fats can be recycled as long as the amount of added animal fat has not caused the liquid to solidify. The method of collection that is being used can only handle liquids, not solids.

Please do not pour used cooking oil down sinks or other drains. Approximately 50% of all sanitary sewer overflow events are caused by used cooking oils, fats and grease clogging the sanitary sewer system. These overflow events are both costly and damaging to the environment and to public health. Use paper towels to wipe excess cooking oil from cooking pans and serving dishes prior to washing. Even these small quantities of cooking oil can accumulate over time and clog sewers and septic systems.

Used cooking oil is recycled into several valuable commodities including industrial fuel, soap, cosmetics, poultry feed, and many more.
